## Assignment 3

**Last Submission Date: 2/2/2016 23:45**

## Instructions

**Building a  
Pub/Sub  
Platform:****Problem Statement:**

In this assignment, you have to build a demonstrative Publish-Subscribe Platform. You must have at least 2 publishers and a minimum of 4 different subscribers to show the demo. Please note that the Pub/Sub platform should be able to cater to situations where the contact information relating to a publisher or subscriber changes (e.g. their IP Address or Email), but the process doesn't break (the publisher or subscriber can inform the pub/sub platform of the change, and the same shall be incorporated).

You are free to choose any technology stack to do the assignment, keeping in mind that you'll have to give a demo of the same. In case you want to revise the concepts relating to the style, refer to this (internal) [link](#).

**Deliverables:**

You will have to submit all the relevant code written by you, along with any third party libraries (if you use any) as a Zip File.

**Evaluation Scheme:**

To be announced later.

**Deadline:**

~~Jan 31~~ Feb 2 (**extended**), 2016, 11:45 PM

**Submit**
